Motor LINE 16 P

Passenger Boat

Motor Line 16 P passenger boat was designed to provide passenger transportation by sea and river, it can be successfully used either for regular ferry routes or for pleasure cruises or for other kind water activities (diving etc).

Design

Single/twin-screw vessel with lifted forecastle, bulb less bow, transom aft, steel hull with simplified contours and advanced superstructure with large glazing.

Description

Motor Line 16 P design developed to meet new requirements of passenger boat industry such as efficiency and payback.

Selection of the most efficient speed on the route, reduction of the fuel consumption, decrease of crew expenses allow to minimize operating cost.

The use of modern high quality equipment will increase reliability of the vessel and consequently guarantee the time schedule with minimum service and maintenance cost.

Reduction of the main dimension, displacement and equipment capacity lead to the minimum off-season costs, allow to avoid dock repair expenses and save on launch and lift operations in the end and beginning of navigation.

Result - reliable and efficient vessel.
